

Corporate Environmental Policy

Schindler complies with the legal environmental requirements and adheres to the high industry standards by setting and fulfilling measurable objectives and by establishing an environmental management system.

Schindler designs, manufactures, installs and maintains elevators, escalators and moving walks globally. Environmental management is incorporated into all these activities.

Schindler strives for a continuous improvement of energy efficiency, the use of environmentally compatible materials, re-use and recycling, minimization of fossil fuels consumption, respectful waste management, and promotes environmentally friendly technical innovations.

Schindler commits to consult with stakeholders on environmental issues and involves its suppliers and partners to participate and accept the same environmental principles, and sponsors projects that target clean transportation.

Schindler continuously monitors its environmental performance and establishes continuous improvement plans to ultimately contribute to a better planet. Schindler regularly reports on environmental performance through its annual corporate responsibility report.

Schindler management and employees are committed to our environmental policy and to actively implementing it.
