

Schindler Digital Innovations

Enhancing the customer experience from design until operation

Schindler is introducing solutions that extend beyond the technical components of an elevator or escalator. These innovative digital products aim to improve the full customer lifecycle from design until maintenance and will improve the experience for passengers.

Development phase

Starting from the development phase of your project, the Schindler Plan & Design tool will help find the elevator or escalator that technically and esthetically fits the needs of your building – in just a few clicks.

Additionally, our elevators and escalators are available as 3D models to support BIM (Building Information Modelling) and provide traceability and insights throughout your project.

Installation phase

During the installation phase of your project, we offer the Robotic Installation System for Elevators (Schindler R.I.S.E), the fastest installation method to date. For the first time in history, a robot can execute elevator installation steps autonomously to prepare the hoistway. This provides many benefits, including a safe and high-quality installation of elevators.

Schindler Digital Innovations

Preparing for the future today

Operation phase

After your elevator is running, our Digital Services: Schindler Ahead RemoteMonitoring and Schindler Ahead ActionBoard help you manage its performance. The first solution offers permanent status and real-time performance monitoring of elevators and escalators to support the maintenance of your equipment. While the second solution provides a digital platform for our customers to obtain real-time information on the operation of the elevator.

Passenger experience

Our digital innovations do not only provide support during the development and maintenance of your project, Schindler also offers solutions that go one step further to enhance the overall experience for your passengers.

To help your passenger get to their destination faster and to provide improved security for buildings, we offer PORT Technology for Transit management.

Our Digital Media Services make waiting and riding more exciting. These solutions provide a unique opportunity to entertain, advertise and inform your guests in the places where they congregate – both inside and outside of the elevator.

Ensuring the health of your passengers has become an increasingly important requirement for elevators and escalators. Therefore, Schindler has introduced a new line of CleanMobility solutions, which specifically support the sanitization of our products and the social distancing of riders.

Trailblazing technology

Schindler has been a pioneer in elevator technology with a long tradition of developing innovative mobility solutions, including the first-ever patent for elevators without a machine room. Visit <https://schldr.link/35JZL1> for more about Schindler's ongoing digital innovations.
